

2012 - Training Catalog

How to use this catalog:

Duration Indicates the duration of classroom training in days, virtual classroom training in days & individual computer based training in hours.

I-Learning Training items may include Individual Learning tools such as Computer Based Training (CD-ROM, Web Based Learning). Some training are 100% based upon I-Learning, whereas other are "blended". Trainees may learn at their own pace to optimize apprenticeship.

V-Learning Training items may include Virtual Learning tools such as Virtual Classroom, Virtual Labs... These learning techniques offer the same level of service as traditional "on-site" classroom training; thanks to remote techniques, trainees are connected to real equipment in synchronous mode, and they are on line with a distant expert certified instructor. Virtual learning techniques are mostly blended with other techniques to optimize apprenticeship and to provide low cost training.

C-Learning Training items may include traditional Classroom Learning. Most of our legacy offer is based upon full classroom training, but more and more training are blended with other techniques such as I-Learning or V-Learning. Trainees are in small groups lead by expert certified trainers.
